

MicroMD® EMR for Urology

While office-based procedure volumes have increased in recent years and competition from overlapping specialties remains steady, urologists must still retain broad medical and surgical expertise. In the face of these and other priorities, MicroMD EMR offers a wide range of features that can help streamline your management of complex medical problems, coordinate care with referring providers and focus on patient care.

Integrated lab results and trending

Access PSA, urinalysis, blood count and other lab results from in-house and reference labs through a bi-directional, HL7-interface; assess at a glance how lab values are trending over time.

*Diagnostic test and imaging management

Quickly record biopsy, DRE, urine culture, and other diagnostic results for convenient future reference; access cystourethroscopy, laparoscopy, CT, MRI, ultrasound and other images for provider review or patient education.

Surgical procedures and surgical management

Customize common lists to quickly document and review details about patients' surgeries and in-office procedures.

Risk profiles

Upon opening a patient's chart, immediately view a summary of risk factors, such as elevated PSA, family history or personal history of cancer, or lifestyle habits.

Patient-specific alerts

In individual patient's files, indicate specific problems, family history details, surgical history details, or other chart items as alerts.

Prevention programs

See what's missed, current, due and scheduled as you manage ongoing PSA, testicular exams, DRE and other screening programs.

* Imaging features are intended for documentation and patient education purposes and should not be used for diagnosis or treatment.
